

2020 CERTIFICATION

Consumer Confidence Report (CCR)

Moore Bayou Water Assocation

Public Water System Name

01400012, 0140051, 0140052 List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community Public Water System (PWS) to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the PWS, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper

procedures when distributing the CCR.

2020 Annual Drinking Water Quality Report Moore Bayou Water Association, Inc. PWS#: 0140012, 0140051 & 0140052 May 2021

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Meridian Upper Wilcox Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Moore Bayou Water Association have received a lower susceptibility ranking to contamination.

If you have any questions about this report or concerning your water utility, please contact Thomas E. Clayton, Jr. 662.326.3322. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meeting. They are held on the third Tuesday of each month at 6:00 PM at the Thomas Clayton Office in Marks, MS.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that we detected during the period of January 1st to December 31st, 2020. In cases where monitoring wasn't required in 2020, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) – The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Chlorine	N	2020	7	.58	ppm	0	MRDL = 4	Water additive used to control microbes

^{*} Most recent sample. No sample required for 2020.

Disinfection By-Products:

We routinely monitor for the presence of drinking water contaminants. The water supplied from system #0140052 presented high levels of TTHM in all quarters of 2020. The system has added more chlorine and continue to flush the lines regularly and plan to connect to the original system.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Moore Bayou Water Association works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

⁽⁸²⁾ Total Trihalomethanes (TTHMs). Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous systems, and may have an increased risk of getting cancer.

Towner declined to comment about Stringer's employ-

ment and the next step to find a new coach.

In the video Thursday, Stringer thanked God for opportunity to be at CCC for six years. He played basketball for CCC, graduated from Coahoma County High School in 1994, was the Oakhurst Middle School principal and coached in several capacities in the Clarksdale Municipal School District and then-Coahoma Agricultural High School. He talked about how he worked in community for

20 years total.

"At this point, I think it's time for me to change chapters," Stringer said. "I think it's time for me to move forward. At this time, someone has made a recommendation saying they want me to resign from my job duties at Coahoma Community College and I just want to say thank God for all the opportunity. Normally, in the past, I'd probably be all upset and disgruntled and things like that. But I started looking at it where God is taking me. Sometimes in life you've just got to move on. Sometimes you just go where God wants you to go."

Stringer said he has put everything in God's hands.

"Like a young black man like me, I came from the project to the Pinnacle," said Stringer, who grew up in a one-

parent home.

Stringer said he is thankful and blessed to be position in, thanked everyone for their support and blessed those who did not support him. Speaking to the administration, he said prayed and hope things improved. He praised the job CCC women's basketball coach Stephanie Murphy, women's assistant basketball coach Isaiah Butler and head football coach Travis Macon have done to improve the athletic pro-

Stringer said the men's basketball program did not win a game the year before he took over and he is leaving the pro-

gram better than he found it.

"All the kids that have graduated, all the kids that are former players that have worked hard for me, I'm just really blessed and thankful that God entrusted me and their parents entrusted me to help lead and guide them for the years that I have guided them," Stringer said.

Stringer said the last three years the CCC men's basketball team had a 93 percent graduation rate along with the highest GPA on campus at one point at 2.9. He added God placed something inside him to encourage and motivate kids to do better.

We're pleased to present to yo services we deliver to you ever, understand the efforts we mak ensuring the quality of your water

2020 Annual Driving Water Quality Report Moore Bayou Water Association, Inc. PWS# 0140012, 0140051 & 0140052 May 2021

Warre pleased to present to you this work Annual Quality Natur Report. This report is dampted to inform you about the quality senter and services are determined to provide you will a safe and dependable supply of drawing voter. We want you to sentented the entority we make to constructly improve the water troubsent and protect our water executive. We are constructly improve the water freedom to proceed and protect our water executive. We are constructly improve the water freedom to the manual protect our water. Our water source to from wells disasting from the Manuals Users Wilson Applier.

The approx water acceptanced has been completed for our gubbs water system to determine the countrillates is to driving water august to identified potential sources of committation. A report containing desired information on how the standards obtained approximations water made has been furnished to our public water system and is available for vicining upon sequent. The water for the their Bayou Water Australians have received a lower susceptibility making to containington.

If you have any quarters record this report or concerning your water utility, givese contact Thomas E. Chayton, is, this 20%3522. We want our valued contrained to be informed attack their water utility. If you want to journ motor, please attend any of our regularly scheduled mosting. They are held on the third Tuesday of each month at 6:00 PM at the Thomas Clayton Office in Marks, MS.

We understy remain for confirmments in your disking water according to Federal and Stella large. This table below hats all all the disking water confirmments that we detected during the particle of January of to Occarding 1911, 2020. In cases where manufacting water could be particle of land or undergoined, it describes make any examing intracted and, the lattle related the most retrief mentals and, as were instead or confirments from the presence of arrivals or from furnational and, it gene cases, retrieval to the materials and, miscolar confirmments, such as whome and bacteria, that may come from towage theorems places, septic systems, ejeculated exercises, and whether increasing an exercise confirmments, such as safe, and metals, which can be naturally occurring or result from being alarminate form a sensity of sources such as agriculture, of and gos production, mining, or ferming sessiones and heredays, which may come from a sensity of sources such as agriculture, often also production, mining, or ferming sessiones and heredays, which may come from a sensity of sources such as agriculture, often as sounded to the natural occurring or seal from a continuous sensity, electing anythesis and experience describes confirmments which can be naturally occurring or be the result of oil and gas production and mining accordance of a sensity of oil and gas production and mining accordance of a sensity of oil and gas production and mining accordance on the sensity of oil and gas production and mining accordance on the sensity of oil and gas production and mining accordance on the sensity of oil and gas production and mining accordance on the sensity of oil and gas production and mining accordance on the sensity of oil and gas production and mining accordance on the sensity of oil and gas production and mining accordance on the sensity of oil and gas production and mining accordance on the sensity of oil and gas production and mining accordance on the sensity of oil and gas production and mining accordance on the sensity

In this labor you will find many become and abbreviolisms you might not be familiar with. To help you befor understand those terms we've provided the following contributes:

Action Lovel - the concentration of a contaminant which, if exceeded, magnes bushment or other requirements which a value epotem main below.

Attachment Conformation Level (BCCL) - The "blackment Allowed" (MCL) is the highest level of a conformation that is allowed in drinking water.

MCLs are set as close to the MCL So as feasible using the best available treatment technology.

Maximum Contestinant Lovet Class (MCLG) - The "ContribitCLG) is the level of a conteminant in directing water below which there is no known or expected risk to health. MCLGs above for a margin of safety.

Maxicum Resistal Disintestant Lover (MRDL) - The highest lovel of a deinfectant allowed in chinking water. There is combining evidence that addition of a deinfectant is necessary to control microbial conteminants.

Maximum Residual Disinfection Cover Good (MRSES) — The level of a drinking water disinfection below which there is no brown or expected risk of health. MRSES is do not reflect the benefits of the use of disinfectants to control unknown contaminants.

Posts per million (ppm) or Milligrans per fler (migh) - one past per million corresponds to one minute in two years or a single perny in \$10,000.

Party per billion (bott) or Misrograms per Mar - one part per billion corresponds to one minute in 2,000 years, or a single penty in \$10,000,000. test results PWS ID #: 0140012 Lively Science of Cardeninssion Range of Detects or 6 of Somples 1542 MICILG MICL Clain Contominant Visibilien Measure Calbotted Detected EVERNESS -county NICLIACI Inorganic Contaminants Expands of natural deposits; runoff from 12/3 No Ronge opb 26 94 2620 orchards; named from place and 8 Arsone electronics production wastes Discharge of drilling sectors, discharge seen restal reference, provider of referen ,0057 No Resair COM 16.
